

Alaska Owned and Operated since 1974

## GUARDIAN

**Alaska's only locally owned security company. Monitoring your safety 24/7**

**In This Issue:**

- 1 No Phone? No Problem?**
- 2 No Substitute**
- 3 Emergency Contact List**
- 4 Security for Seniors**

## No Phone? No Problem!

Most alarm systems are dependent on a working phone line. If a system goes into alarm, the signal is sent by phone line to Central Monitoring Station for action. If you've made changes to your phone service since your security alarm system was installed, it's important to know these changes can affect the proper functioning of your system.

For example, if you've switched from traditional landline telephone service to Internet phone service, it's important to discuss the ramifications of this change with a Guardian service consultant. Your system can be monitored through Internet monitoring. If you've installed DSL for Internet usage, this can affect the transmission of signals as well. A filter may be necessary. Give us a call and we can work with you to test your system and ensure that nothing interrupts communication between your system and the Central Station. If you're thinking of canceling landline phone service, your system can still be monitored in other ways. Internet monitoring is a reliable service, or AES Long-range Radio

monitoring will also ensure a signal reaches our Central Station. AES Long-Range Radio monitoring makes sense for a location that doesn't have phone or internet connections, or if your circumstances require a backup to phone line transmission.

AES Long-range Radio communication was originally engineered for military operational security. It works by setting up a wireless network based on radio technology. Guardian owns a private radio network. This network sends and receives radio signals between transceivers and our Central Station, so a phone line is unnecessary. Radio monitoring is a good choice in an area where phone or cellular services aren't available. Because it requires no cables or wiring, installation is also simple. Its strengths are its speed of transmission to the Central Station as well as its flexibility.

# No Substitute for Local Monitoring

Perhaps you've seen the advertisements in the Sunday paper for an alarm system. Perhaps you've seen a display at the local box store. The advertisements sound about the same: an intrusion alarm system, maybe even home automation, all for next-to-nothing prices. All you have to do is decide what you need, install it yourself, monitor it yourself, and maybe even sign a contract for three and a half years. Extra fees apply if you have an old system to link to, or if you want extras like a phone call when your alarm is tripped.

If you have ever heard the saying, "If it sounds too good to be true, it probably is," then you know what comes next. Guardian is dedicated to protecting customers in as many ways as

possible, and that includes protecting our customers from inferior service.

The fact is, Guardian Security works hard to research and provide the very latest in security technology and

*Guardian's Central Station is the only locally owned and operated monitoring station in the state of Alaska, and is in continuous operation, 24 hours a day, 7 days a week.*

equipment. We maintain local monitoring service for our customers, as well as personal services such as patrol response and guard-work.

What other companies consider extra, Guardian considers part of excellent customer service, such as free consultations, free yard signs, and more. There isn't any substitute for a local monitoring station. Our employees are highly trained Alaskan friends and neighbors, familiar with the challenges of living in our state and familiar with current security trends or threats.

Guardian Security is **the** cutting-edge, Alaska-grown security company, and we appreciate your business.

## Refer-a-Friend

**Here's how it works:**

**Recommend a friend or family member to Guardian.**

**We will provide an informative security assessment and recommendations.**

**If your friend signs up for Alaska's *only* locally owned security system monitoring, we will thank *you* with a month of free monitoring!**

# SECURITY FOR SENIORS

Seniors, or those who have an elderly loved one, can help ensure independent living and safety with adequate security measures. Attention to a few details can make the independent living experience more rewarding for everyone involved.

First, analyze the environment. Are doors and windows easily locked? A lock does no good if the mechanism is too difficult to grasp. Replace mechanisms that no longer suit.

Of course, a properly installed and functioning security alarm system is a smart choice for everyone, including those who have reached more mature stages of life. A monitored system provides another layer of protection, allowing Guardian to check in by phone before going down the Emergency Contact List, and then notifying law enforcement if necessary. The assurance of Guardian's 24/7 monitoring for a loved one cannot be understated.

*Our Central Station is staffed around the clock and is available to answer questions about your system, testing your system, or how to schedule service.*

Consider installing motion-activated lighting over driveways, walkways, and porches to keep travel to and from the home as safe as possible.

Video surveillance is another option for seniors and their families. Cameras can verify the activity in every area of the house. Remote access via computer or phone can provide another layer of care

for an elderly parent or friend.

Ensure that batteries are regularly checked and replaced in fire alarms, smoke detectors, and carbon monoxide detectors. Verify the alarm can be heard or seen if one of these harmful substances is detected.

With a few practical steps, living at home can be safer and more secure. Give us a call; Guardian is ready to help you meet your security needs!
